

Foodie: React-based web application for ordering food, enabling users to browse restaurants, menu items, add them to the cart, and place orders.

Designed and implemented an intuitive user interface allowing seamless browsing of menu items, complete with descriptions, prices, and images. Utilized React.js, React Router for navigation, and Redux to centralize application state management and reliable data flow across components.

Phase 1:

Key Features

- Search-Based Restaurants Filter.
- Customized Hooks
- Parcel Bundler
- Shimmer UI
- Tailwind CSS
- Functional & Class-Based Components.
- React Router DOM for routing & navigation.
- React Redux Toolkit
- Accordion From Scratch
- Lazy Loading
- Context API
- Error Handling on Routes
- Modularized code base

Phase 2:

- UI Enhancement
- Chat Support
- Checkout Page
- Order Detail Page
